

TASK 01

Professional Personal Portfolio Website

Project Documentation Report

Student Name	Unsa Rani
Internship Domain	Web Development
Task Number	Task 01
Technologies	HTML5 & CSS3
Live Website	my-professional-portfolio2.netlify.app

1. Student & Task Information

Field	Details
Student Name	Unsa Rani
Internship Domain	Web Development
Task Number	Task 01
Organization	Devixo Solutions - Web Development Internship Program
Task Title	Professional Personal Portfolio Website
Live Website	https://my-professional-portfolio2.netlify.app/

2. Objective

The objective of this task was to design and develop a modern, professional and fully responsive personal portfolio website using HTML5 and CSS3. The website presents my personal profile, technical skills, education, projects and contact information through a clean and attractive interface.

The site is built entirely with my own HTML and CSS code, without JavaScript, Bootstrap, Tailwind CSS, downloaded templates or any other UI framework, as required by the task guidelines.

3. Problem Statement

A fresher developer needs a professional online presence that shows skills, education, projects and contact details in one place. A simple resume cannot show real work, and many portfolios are built from templates or UI frameworks, which hides the developer's own coding ability. This task requires a clean, responsive portfolio website built from scratch with my own HTML5 and CSS3 code, working on desktop, laptop, tablet and mobile screens.

4. Technologies Used

Technology	Purpose
HTML5	Semantic page structure (header, nav, section, footer, form)
CSS3	Custom styling, Flexbox/Grid layouts, media queries, hover effects and animations
Git & GitHub	Version control and project hosting
Netlify	Free hosting and live deployment of the website
VS Code	Code editor used for development

5. Website Structure

The portfolio is a single-page website. A sticky navigation bar links to each section, so visitors can move through the page smoothly.

Section	Content
Home (Hero)	Name, professional tagline, short introduction, profile image and call-to-action buttons (View My Work / Let's Talk)
About	Short personal introduction, academic background and career interests
Skills	Numbered skill cards: HTML5, CSS3, JavaScript, React.js, Node.js, Express.js, MongoDB, Git & GitHub, REST APIs and more
Education	Bachelor's in Computer Science, Iqra University Hyderabad (2026 - Present); Intermediate (2024); Foundation Year (2025); Programming Diploma, SMIT (2026); Cisco Programming Certification (2025)
Projects	Project cards for ELYSIA, Brew & Bliss and LeadFlow with description, technologies and links
Activities	Beyond Coding: Model United Nations, Debating, Organization & Volunteering
Contact	Email, phone, location, LinkedIn and GitHub links plus a contact form UI (Name, Email, Subject, Message)
Footer	Copyright, name, quick navigation links and social links

Project folder structure

```
My-Portfolio/  
  index.html  
  style.css  
  profile.jpg  
  images/ (project thumbnails)  
  screenshots/  
  Portfolio Report.pdf  
  README.md
```

6. Design Approach

- **Clean and modern layout:** plenty of white space, clear sections and a strong visual hierarchy so content is easy to scan.
- **Consistent color theme:** a dark background with a gold accent color is used for buttons, headings, cards and links across the whole site, giving an elegant professional look.
- **Readable typography:** elegant serif headings with clean sans-serif body text, good contrast and consistent spacing.

- **Mobile-friendly:** built with responsive CSS (Flexbox, Grid and media queries) for desktop, laptop, tablet and mobile, with a CSS-only menu icon on small screens.
- **Semantic HTML and clean code:** meaningful class and ID names and a properly formatted, well-organized codebase.

7. Implementation Steps

Step 1. Planning: I listed the required sections (Home, About, Skills, Education, Projects, Contact), chose a dark theme with a gold accent colour, and planned the folder structure.

Step 2. HTML structure: I wrote semantic HTML with header, nav, main, section, form and footer tags, and gave every section a clear ID so the navigation links work.

Step 3. CSS foundation: I created colour variables in :root, a basic reset, shared container and heading styles, so the whole site stays consistent.

Step 4. Section styling: I styled the hero section, skill cards, education list, project cards, activities cards, contact details and the contact form with Flexbox and Grid.

Step 5. Responsive design: I added media queries for laptop, tablet and mobile screens, and built a mobile menu icon that opens and closes using only CSS (the :target selector).

Step 6. Effects: I added smooth scrolling, hover effects on buttons, links, cards and icons, and a soft scroll animation for the cards, all with CSS.

Step 7. Testing: I tested the website at desktop and mobile sizes, checked every navigation link, and fixed layout and image problems.

Step 8. Version control and deployment: I uploaded the project to GitHub with a README and report, and deployed the website on Netlify.

8. Website Features

Responsive Design Works on desktop, laptop, tablet and mobile without layout breaking or horizontal scrolling.	Navigation Bar Clear navigation with working links to every section, plus a CSS-only menu icon on mobile.
Hero Section Name, tagline, introduction, profile image and call-to-action buttons.	Skill Cards Numbered cards with a title and short description for each skill.
Project Cards Consistent cards with thumbnail, description, technologies used and live project link.	Smooth Scrolling Clicking a menu link scrolls smoothly to the target section.
Hover Effects Subtle hover animations on buttons, links and cards.	Contact Form UI Professional form with Name, Email, Subject and Message fields (front-end only, no backend required).
Footer Copyright, name, quick navigation links and social links.	

9. Code Screenshots

The website is written entirely with my own HTML and CSS code. The screenshots below show important parts of the source code in VS Code, each with a short explanation.

```
2 <html lang="en">
3 <head>
4   <meta charset="UTF-8">
5   <meta name="viewport" content="width=device-width, initial-scale=1.0">
6   <title>My Portfolio</title>
7 </head>
8 <body>
9   <!-- HEADER: logo and navigation bar -->
10
11   <header class="header">
12     <div class="nav-container">
13
14       <a href="#home" class="logo">UR</a>
15
16       <!-- Mobile menu icons (CSS-only: opened and closed with the :target selector, no JavaScript) -->
17
18       <a href="#navbar" class="menu-toggle" aria-label="open navigation menu">
19         <svg width="26" height="26" viewBox="0 0 24 24" fill="none" stroke="currentColor" stroke-width="2">
20           <path stroke="currentcolor" d="M4 6h16M4 12h16M4 18h16" />
21         </svg>
22       </a>
23
24       <a href="#close" class="menu-close" aria-label="close navigation menu">
25         <svg width="26" height="26" viewBox="0 0 24 24" fill="none" stroke="currentColor" stroke-width="2">
26           <path stroke="currentcolor" d="M6 6l12 12M18 6l-12 12" />
27         </svg>
28       </a>
29
30       <!-- Navigation links - each link scrolls to a section id -->
31
32       <nav class="navbar" id="navbar">
33         <a href="#home">Home</a>
34         <a href="#about">About</a>
35         <a href="#skills">Skills</a>
36         <a href="#education">Education</a>
37         <a href="#projects">Projects</a>
38         <a href="#activities">Activities</a>
39         <a href="#contact">Contact</a>
40         <a href="#contact" class="hire-btn">Hire Me</a>
41       </nav>
42     </div>
43   </header>
44
45   <main>
46     <section class="about" id="about">
47       <div class="container">
48         <div class="section-heading reveal">
49           <p class="section-label">My Skills</p>
50           <h2>Tools I work with.</h2>
51           <p>Technologies and tools I use to design, develop and deploy modern web experiences.</p>
52         </div>
53       </div>
54     </section>
55   </main>
56 </body>
57 </html>
```

Figure: HTML - navigation bar and header (index.html)

Explanation: The header uses semantic tags: a logo link, the mobile menu icons and a nav element whose links point to section IDs such as #about and #skills. This is what makes the navigation work and scroll smoothly.

```
146 <section class="about" id="about">
147   <div class="container">
148     <div class="section-heading reveal">
149       <p class="section-label">My Skills</p>
150       <h2>Tools I work with.</h2>
151       <p>Technologies and tools I use to design, develop and deploy modern web experiences.</p>
152     </div>
153   </div>
154 </section>
155
156 <!-- SKILLS SECTION: one card for each skill -->
157
158 <section class="skills" id="skills">
159   <div class="container">
160     <div class="section-heading reveal">
161       <p class="section-label">My Skills</p>
162       <h2>Tools I work with.</h2>
163       <p>Technologies and tools I use to design, develop and deploy modern web experiences.</p>
164     </div>
165   </div>
166 </section>
```

Figure: HTML - skills section (index.html)

Explanation: Each skill is a card (div with class skill-card) containing a number, a heading and a short description. The same structure is repeated for every skill, so one CSS rule styles all the cards.

Figure: HTML - projects section (index.html)

Explanation: The projects section holds a heading and a projects grid. Each project is an article card with an image, a title, a description, technology tags and a View Project link.

Figure: CSS - tablet responsive styles (style.css)

Explanation: A media query for screens up to 800px wide. It changes the layout for tablets: the header height, the menu icon and the stacked layouts, so the website does not break on smaller screens.

Figure: CSS - mobile responsive styles (style.css)

Explanation: A media query for screens up to 550px wide. It reduces the container width, section spacing and font sizes, and stacks the buttons so everything fits a phone without horizontal scrolling.

10. Desktop Screenshots (Output)

The screenshots below show the final output of each section of the website on a desktop browser.

Figure: Desktop view - Home / Hero Section

Explanation: Shows the navigation bar, my name, tagline, short introduction, two call-to-action buttons, quick statistics and the profile image.

Figure: Desktop view - About Section

Explanation: A short personal introduction in two columns: a heading on the left and my background and interests on the right.

Figure: Desktop view - Skills Section

Explanation: Skills are displayed as numbered cards in a grid. The cards have a hover effect.

Figure: Desktop view - Education Section

Explanation: Shows my academic journey as a clean list: degree, institute and other completed education.

Figure: Desktop view - Projects Section

Explanation: Three project cards with a thumbnail, title, description, technologies used and a link to each project.

Figure: Desktop view - Activities Section (Beyond Coding)

Explanation: Cards for MUN, debating and organization and volunteering, which show communication and leadership skills.

Figure: Desktop view - Contact Section

Explanation: Contact details (email, phone, location, LinkedIn, GitHub) on the left and a contact form with Name, Email, Subject, Message and a submit button on the right.

Figure: Desktop view - Footer

Explanation: The footer contains the copyright text with my name, quick navigation links and social links.

11. Mobile Screenshots (Output)

Figure: Mobile - Home

Figure: Mobile - Menu

Figure: Mobile - Skills

Figure: Mobile - Projects

Figure: Mobile - Contact

Figure: Mobile - Contact Form

Explanation: On mobile the layout changes to a single column. The navigation links collapse into a menu icon, the buttons stack vertically, and the skill cards, project cards and contact form fill the screen width. The website has no horizontal scrolling on small screens.

12. Project Screenshots

The portfolio showcases three featured projects, each shown as a project card with thumbnail, description, technologies used and a project link.

Project	Description	Technologies
ELYSIA	Modern local-store ecommerce platform with a clean, responsive interface and full-stack functionality.	React, Node.js, Express, MongoDB
Brew & Bliss	Modern cafe website with cart functionality and booking experience.	React, Node.js, MongoDB, REST API
LeadFlow	Responsive web experience designed to present and manage a streamlined lead generation workflow.	HTML, CSS, JavaScript, Responsive

Figure: Project cards - ELYSIA, Brew & Bliss and LeadFlow

Explanation: The three cards use the same layout, so the section looks consistent. Each card shows a project thumbnail, a category label, the project name, a short description, technology tags and a View Project link.

13. Challenges Faced

- **Image names and paths.** Some images had spaces, an ampersand or capital letters in their names. They worked on my computer, but did not show after uploading, because GitHub and Netlify care about capital letters. I fixed it by renaming the files in lowercase with hyphens (for example brew-bliss.jpg) and updating the paths in the HTML.
- **Mobile menu without JavaScript.** I first used a small script for the menu, but I wanted the project to use only HTML and CSS. I rebuilt the menu with the CSS :target selector, so the menu icon opens it and the links close it.
- **Meeting every requirement.** While checking the task requirements I found missing items: the Subject field, the Phone number and social links in the footer. I also removed a framework name from my skill cards to follow the no-framework rule.
- **Large profile image.** The original profile photo was about 2.5 MB, which slows down the page on mobile. I resized and compressed it to about 300 KB without losing visible quality.
- **Git merge conflict.** GitHub already had a README file, so pushing my new README caused a conflict. I solved it with `git pull --rebase` and kept my updated version.

14. Conclusion

Through this task I built a complete, responsive personal portfolio website using only HTML5 and CSS3. I practised semantic HTML, page layouts with Flexbox and Grid, responsive design with media queries, navigation, smooth scrolling, hover animations and professional UI design.

The finished website presents my profile, skills, education, projects and contact details in a clean and organized way, and it is live on Netlify. The task also helped me use Git and GitHub for version control and documentation, and gave me confidence to keep building better web experiences.

15. GitHub Repository & Links

Item	Link
GitHub Repository	https://github.com/raniunsa24-coder/My-Portfolio
GitHub Profile	https://github.com/raniunsa24-coder
